FOR IMMEDIATE RELEASE

**Smyyth Announces New Functionality with CARIXA Retriever
Automating Data Capture and Distribution**

South Plainfield, NJ—July 1, 2009—Smyyth LLC has announced the remarkable CARIXA Retriever module to its CARIXA revolutionary credit, accounts receivable, collection and deduction management technology platform (SaaS) .

“In development for four years, CARIXA is a best-in-class enterprise product that has been tested by the diverse demands of Smyyth’s accounts receivable outsourcing operations for two years,” said Karen McCann, Vice President of Operations of Smyyth.

“CARIXA RETRIEVER takes a big step forward in automating the very time consuming manual tasks of going to various business web sites and copying or transcribing proofs of delivery or performance, data and documents needed to solve your receivables or business problem. This is integrated in CARIXA.”

“Before Retriever, your staff would have to manually navigate to these sites, log on, search one at a time, download, cut, paste, reformat, and print, all very time consuming, tedious, expensive and (now) unnecessary overhead.”

Carixa Retriever, connects to the web sites of your customers, shippers, internal databases, third parties and product returns centers to quickly and automatically download the data needed to match and reconcile accounts.

There are many uses of this technology, including

- Proofs of Delivery, automatically retrieved and downloaded to your system or sent to your customer with a request for payment
- Debit Memo Detail down to pricing and line items directly from your customer sites/databases
- Automated reconciliation data to resolve returns variances, such as line item debit memo detail from customers, and line item product details from returns centers.

“With CARIXA’s user definable rules and workflow, changes and customization can be easily done by users without IT support, bringing the power to the end users”, McCann said.
